

Leapfrog Internet for Corporate Customers

Are you looking for a **better** and more **cost-effective** solution for your remote users?

Do any of these problems sound familiar?

- Can't get a VPN to work over a dial connection
- Administering usernames and passwords is a headache
- Supporting all the users is very time-consuming
- Can't find a good solution for your home-based users
- Traveling users always call you for access numbers

If you have ever experienced any of these sorts of problems or issues, Leapfrog Internet may have the solution for you! We are a nationwide Internet Service Provider that utilizes several major backbones to provide our corporate customers with fast reliable Internet access at very competitive rates.

Extreme Connectivity- Our business dial backbone is built for especially for commercial use. Our Business Plus account not only offers 8 hour session limits (TWICE the industry norm), it also allows you an average of 16 hours of usage per day.

VPN- Leapfrog offers an open platform so that you can use whatever VPN software you like- there are no compatibility issues. Many of our current Fortune 500 customers have come to us because they couldn't make it work with their old ISP.

Admin- Leapfrog gives YOU the tools to manage your user accounts. You can manage the account on your time schedule, not waiting on hold forever waiting for the next support rep from one of the big ISPs.

Support- Leapfrog handles all support based on your requirements. You can simply direct your users to call us with questions and we will take on all the ISP-related support functions. All of our business customers are supported by Level 2 techs. This means that you will always get someone on the phone who is experienced and knowledgeable and can help you right away without having to go through entry-level support techs.

SOHO Users- If you are having a hard time coming up with solutions for your home-based users, Leapfrog offers nationwide 128K ISDN and business-class DSL.

Road Warriors- We have an easy-to-use dialer that has a list of all the access numbers already loaded. When a user is traveling, all he/she needs to do is pull down the local access number, check the setting to dial an outside number, and they're online in seconds!

Current Leapfrog Customers:

American Express
